

About the Author

Eyal Sheiner, MD, PhD is a professor of Obstetrics and Gynecology at the Soroka University Medical Center, Ben-Gurion University of the Negev, Be'er-Sheva, Israel. He is the Director of the Residency Program at the hospital. Following his residency, he earned his doctorate in Epidemiology and Public Health. Dr Sheiner has published extensively in the area of perinatal epidemiology.

About the book

This book was conceived to satisfy the rising need for epidemiology oriented clinicians. The book is of clinical orientation; it focuses on essential aspects of perinatal medicine in a straightforward accessible manner. It gives epidemiological perspectives on maternal and fetal morbidities in addition to peripartum and neonatal complications. The chapters discuss epidemiology of diabetes mellitus during pregnancy, hypertensive disorders, ectopic pregnancy, preterm delivery, placental problems (abruption and previa), epidemiology of obesity during pregnancy, intra-uterine growth restriction and maternal and perinatal mortality. Written by international experts, this sensible guide draws on evidence-based data in perinatal medicine. The book represents only the clinical aspects from the comprehensive *Textbook of Perinatal Epidemiology* and is a valuable resource for a broad spectrum of clinicians and healthcare professionals dealing with perinatal medicine. Medical and nursing students as well as residents in obstetrics and pediatrics may largely benefit from this book during their training.
