RATIONALE

The 4th International Conference on End Stage Lung Diseases (ESLDS) will take place in Padova, Italy, on November 9th 10th and 11th, 2020.

Based on the success of the previous editions, the scientific organizing committee is excited to launch its 4th theme-based scientific conference.

The ESLD conference is a forum of national and international experts who aim to share experiences and outline best management for patients. The ESLDs focus on progressive lung diseases potentially requiring lung transplantation and this year the main theme will be Cystic Fibrosis (CF).

The efforts of all transplant specialists are directed towards the improvement of the very complex transplant management of these usually young patients.

The novelty of this edition is not only a wide involvement of all the specialists (psychologists, endocrinologists, pneumologists, surgeons, pathologists, immunologists) who play a crucial role in the diagnostic/therapeutic process, but also the participation of patient and family associations.
